Introduction

There is an increasing recognition of the importance of biodiversity within the environmental and development fields. The fundamental work on plant genetic resources that the *Newsletter* has been publishing for many years is an essential resource to workers in this area. To make this information more accessible, an index of articles from issues 25 to 100 of the *Plant Genetic Resources Newsletter* has been prepared. The *Newsletter* started with issue 25 when the former publication, known as the *FAO Plant Introduction Newsletter*, broadened its scope to the field of plant genetic resources. For the sake of completeness, articles from *the Plant Introduction Newsletter* are also included.

The references are arranged by accession number and are accompanied by key words which indicate the subject of the article. A subject/geographic index (trilingual – English, French and Spanish) and author index are given at the end of the bibliography. The subject index gives the first line of the document title and indicates the accession number in the bibliographic list.

All the bibliographic references have been extracted from the FAO Documentation Database. The *Plant Genetic Resources Newsletter* would like to acknowledge the efforts of the FAO Library and Documentation Systems Division, who did all of the work in extracting the information and preparing this index for publication.

The designations employed, and the presentation of material in the periodical, and in maps which appear herein, do not imply the expression of any opinion whatsoever on the part of IPGRI or FAO concerning the legal status of any country, territory, city or area or its authorities, or concerning the delimitation of its frontiers or boundaries. Similarly, the views expressed are those of the authors and do not necessarily reflect the views of IPGRI or FAO.
